

Trotter

design Rogier Martens / 2015

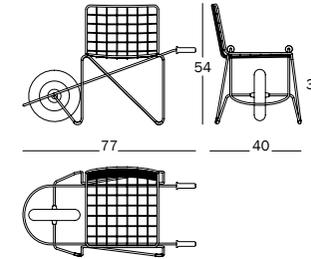

Trotter is a fun and functional mobile chair for children that is made of steel rod and a rotation-moulded orange wheel. Its structure imitates the form of a wheelbarrow and the conspicuous wheel is an invitation for children to be active, in fact it makes it easy to move the chair to the best spot, over and over again.

materials /

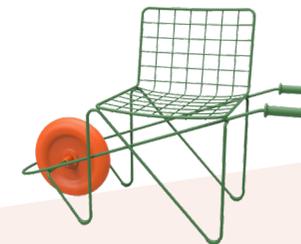

Frame in steel rod painted in polyester powder.
Wheel and handles in polypropylene.

“ the wheel makes it possible in a playful way to easily move the chair ”

colours /

Frame + Handles / Green 1283 C
Wheel / Orange 1089 C

Rogier
Martens

Rogier Martens studio specialises in product and outdoor design. The studio is innovative in its fresh approach, combining distinct designs with the introduction of new technologies. They search for the smartest way to make complex questions understandable. In 2010 he co-founded the design label 'Aandeboom', of which many products are successfully sold on a national and international level.

Martens prefers objects and surroundings with an unmistakable identity. In his designs he actively seeks interaction with the user; to define the needs of the end user he always supports his designs with research. This open approach leads to special designs with great potential for use.
